Claims 1-15: The invention defined by the claims relates to a holder for holding a hands free mobile telephone accessory of the type which has an earpiece and a microphone both attached to a common flexible phone line and spaced apart from each other, the line being able to be plugged into or relative to the telephone. The holder has an ear piece attachment means and a mouth piece attachment means which are spaced apart.

None of the above citations individually or in obvious combination discloses the features defined by the claims.

CLAIMS:

1. A holder for holding a hands free mobile telephone accessory of the type which has an ear piece and a microphone both attached to a common flexible phone line and spaced apart from each other, the line able to be plugged into or relative to the telephone, the holder having an ear piece attachment means (EAM) and a microphone attachment means (MAM) which are spaced apart, the construction and arrangement being that the holder can be held next to a persons head with the EAM being in or adjacent the persons ear, and the MAM being positioned to pick up speech, thereby doing away with the need to attach the microphone to clothing and to insert the ear piece every time the phone is to be used.
2. The holder of claim 1 which comprises a tubular member which can be split to open up into two halves with the inside of the tubular member having means to hold the ear piece and the microphone of the accessory in the tubular member.
3. The holder of claim 2, wherein the means is an insert of resilient foam material which will hold the ear piece and the microphone of the accessory in place.
4. The holder of claim 1, wherein the ear piece is attached to the holder for movement between an extended position where the earpiece can be inserted into a persons ear, and a retracted position.
5. The holder of claim 1, which comprises a substantially plate-like member which .
6. The holder of claim 5, wherein the plate-like member is provided with a plurality of spaced keyhole-type slots which accommodate excess length of the wire which is part of the accessory.
7. The holder of claim 1, which comprises an elongate substantially rectangular body made from two parts which are hinged together and which are openable up to allow the accessory to be inserted into the holder, at least one compartment inside the body to hold the microphone and holding means to hold the ear piece
8. The holder of claim 1, which is formed from two halves which
